

# COMP1110 Assignment 2

Saffron Bannister (u6062525), Lauren Nelson-Lee (u6378754) and Zhewen Li (Lily) (u6437091)

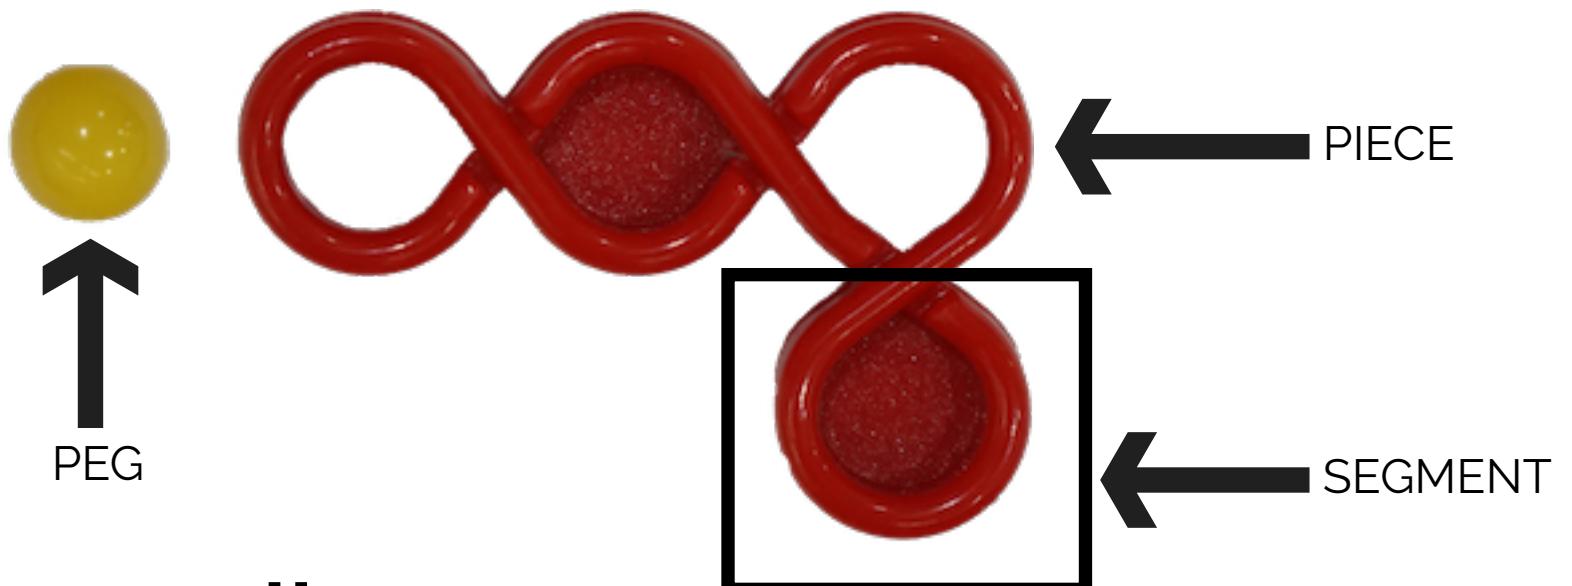

IQ-Twist  
group thu14n

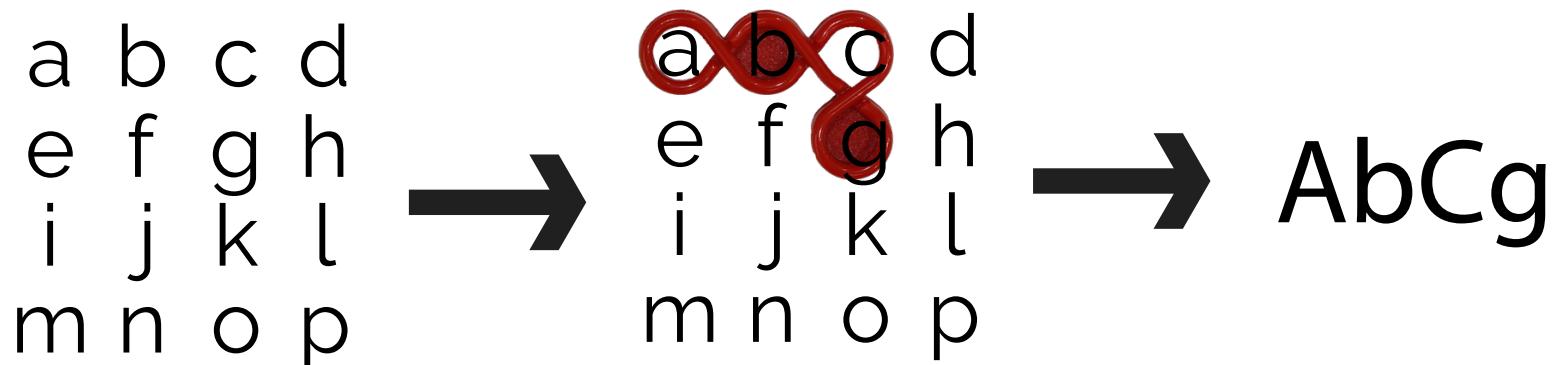

# IQ-Twist

We all know what this game is by now but this is how we implemented it:

Pieces and pegs are represented as classes, with associated enums to represent their shape

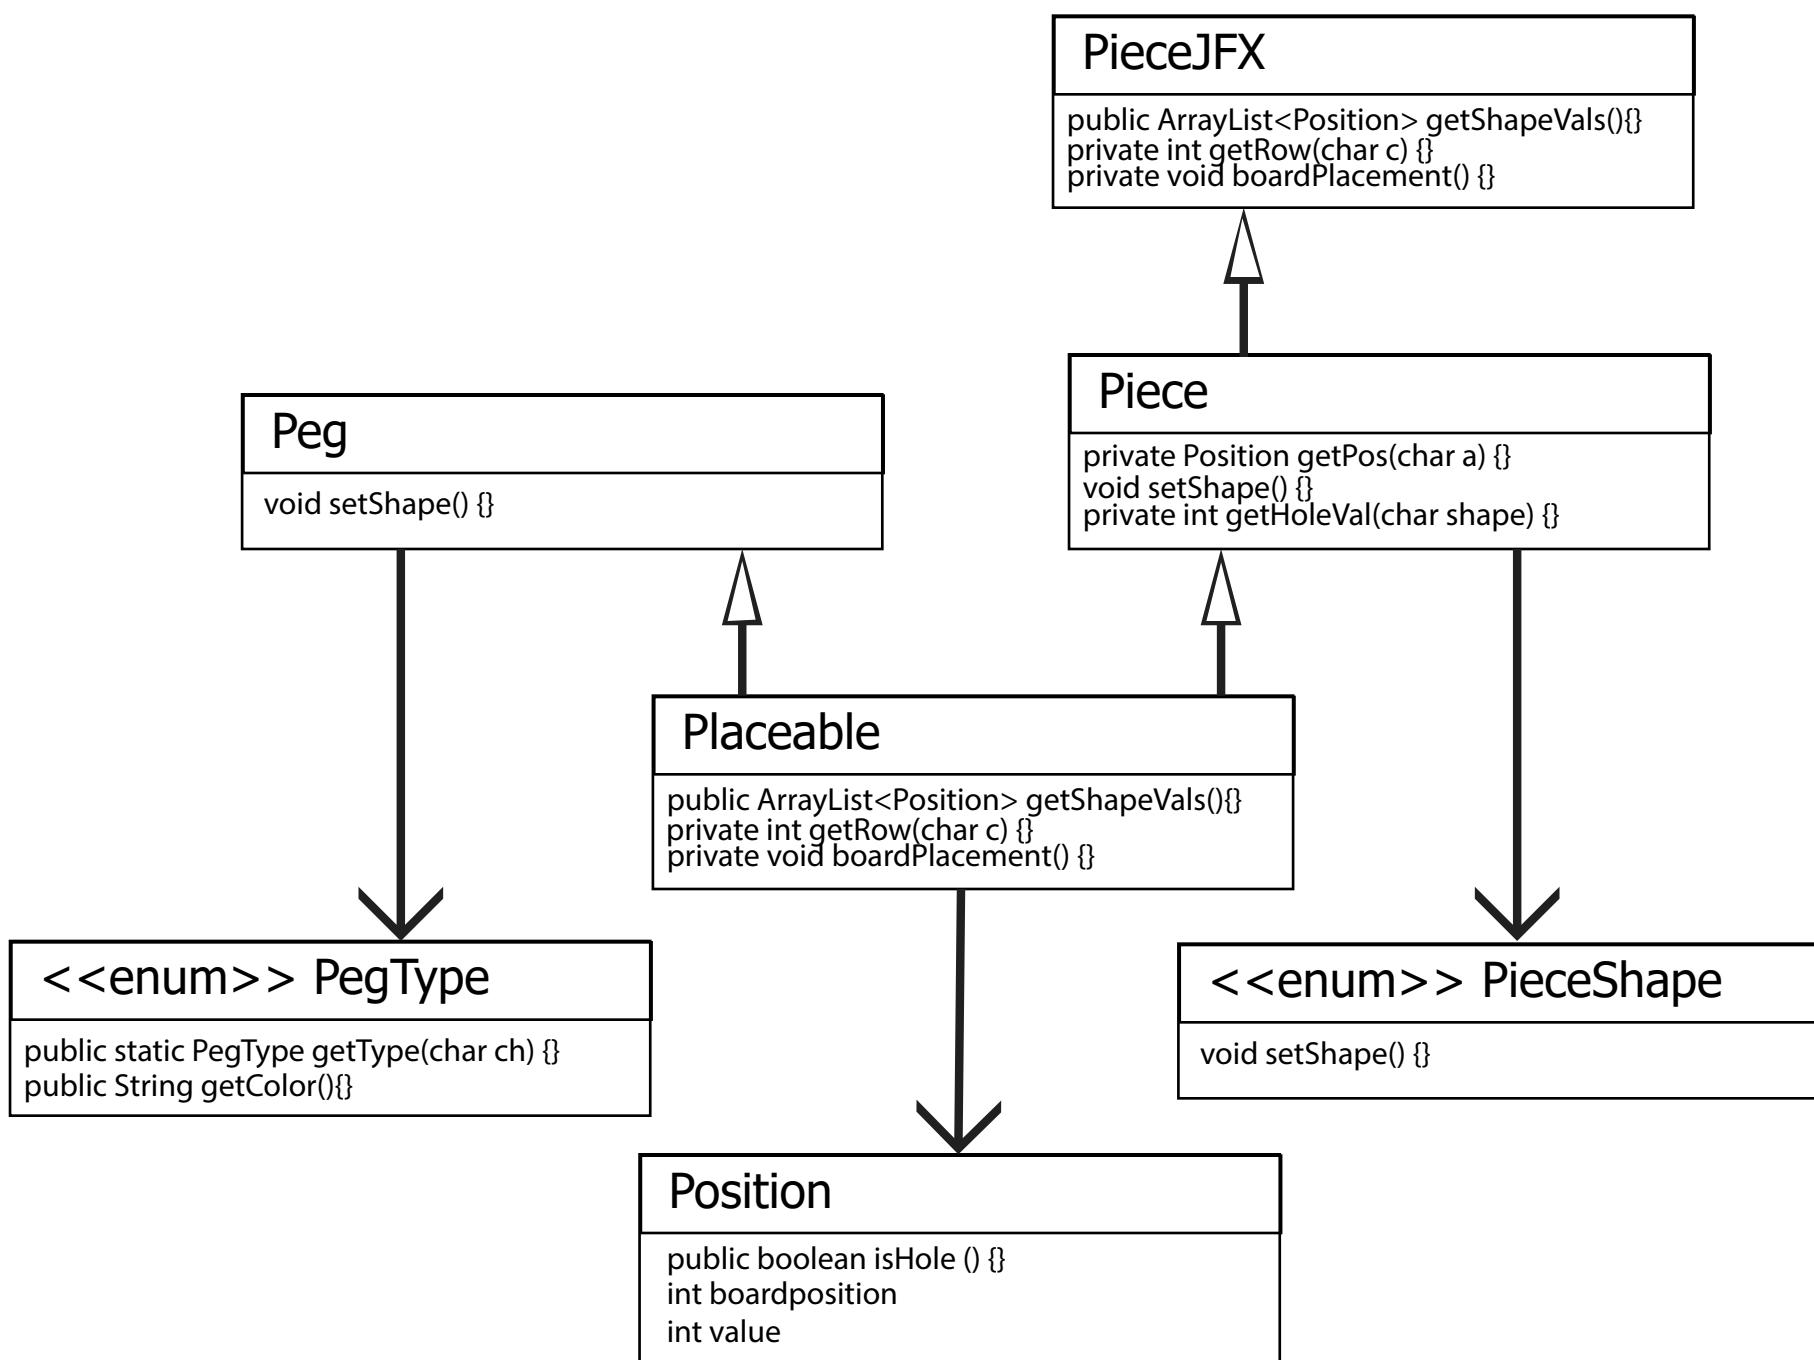

## Piece encoding

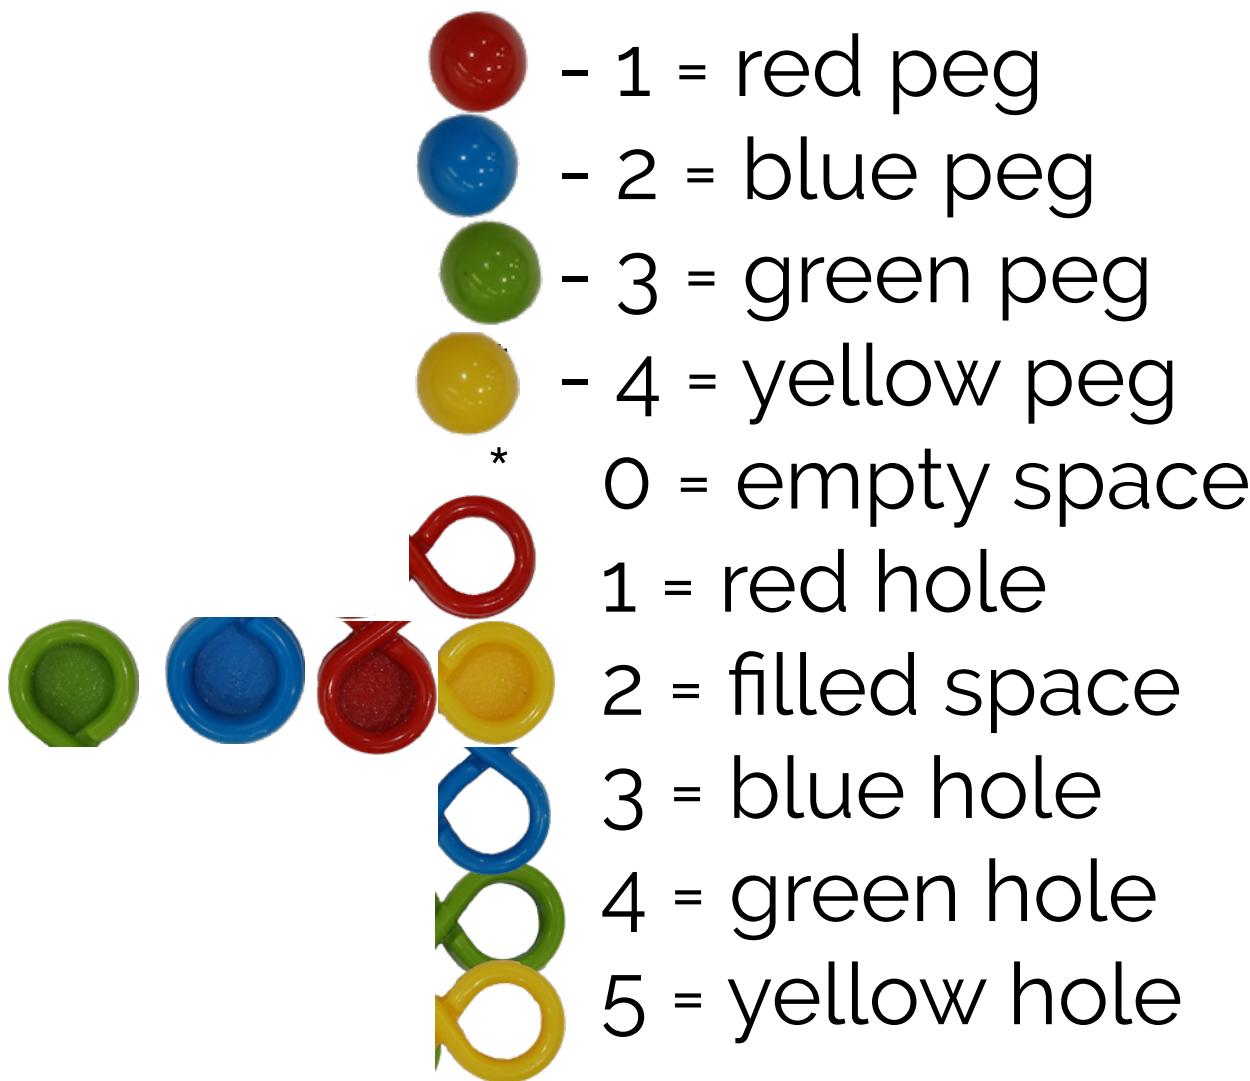

Imagine pieces as existing on a  $4 \times 4$  space where each space is represented by a character.

Then, in order to differentiate between a hole or solid segment you then use capital or lowercase letters to represent the encoding (capital for hole and lowercase for filled)

# Board Simulation

The board is internally simulated as a size 32 array of ints, with each int representing a state for that spot on the board, like this:

○ ○ ○ ○ ○ ○ ○ ○  
○ ○ ○ ○ ○ ○ ○ ○  
○ ○ ○ ○ ○ ○ ○ ○  
○ ○ ○ ○ ○ ○ ○ ○

Here is a size 32 int array representing an empty board  
Imagine placing piece a in rot o at the spot at 1A (a1Ao)

○ ○ ○ ○ ○ ○ ○ ○  
○ ○ ○ ○ ○ ○ ○ ○  
○ ○ ○ ○ ○ ○ ○ ○  
○ ○ ○ ○ ○ ○ ○ ○

We do this by imagining our previous  $4 \times 4$  space starting at the top left position where we want to place our piece, and placing the segments as indicated

a b c d ○ ○ ○ ○ AbCg 1 2 1 0 0 0 0  
e f g h ○ ○ ○ ○ → 0 0 2 0 0 0 0  
i j k l ○ ○ ○ ○ ○ ○ ○ ○  
m n o p ○ ○ ○ ○ ○ ○ ○ ○

Using this implementation we can check whether piece placement is valid  
(by checking against the existing boardstate),

# Viable piece placements

Using the board simulator, generates a set of all valid next placements.

## Solutions

Gets the set of viable next placements, then recursively adds those to the placements until you have a set of complete solutions.

Has a supporting class to determine symmetry.

## Starting placement

Starts with a goal and works backwards, placing pegs in the available holes. The number of pegs is based on a difficulty parameter.

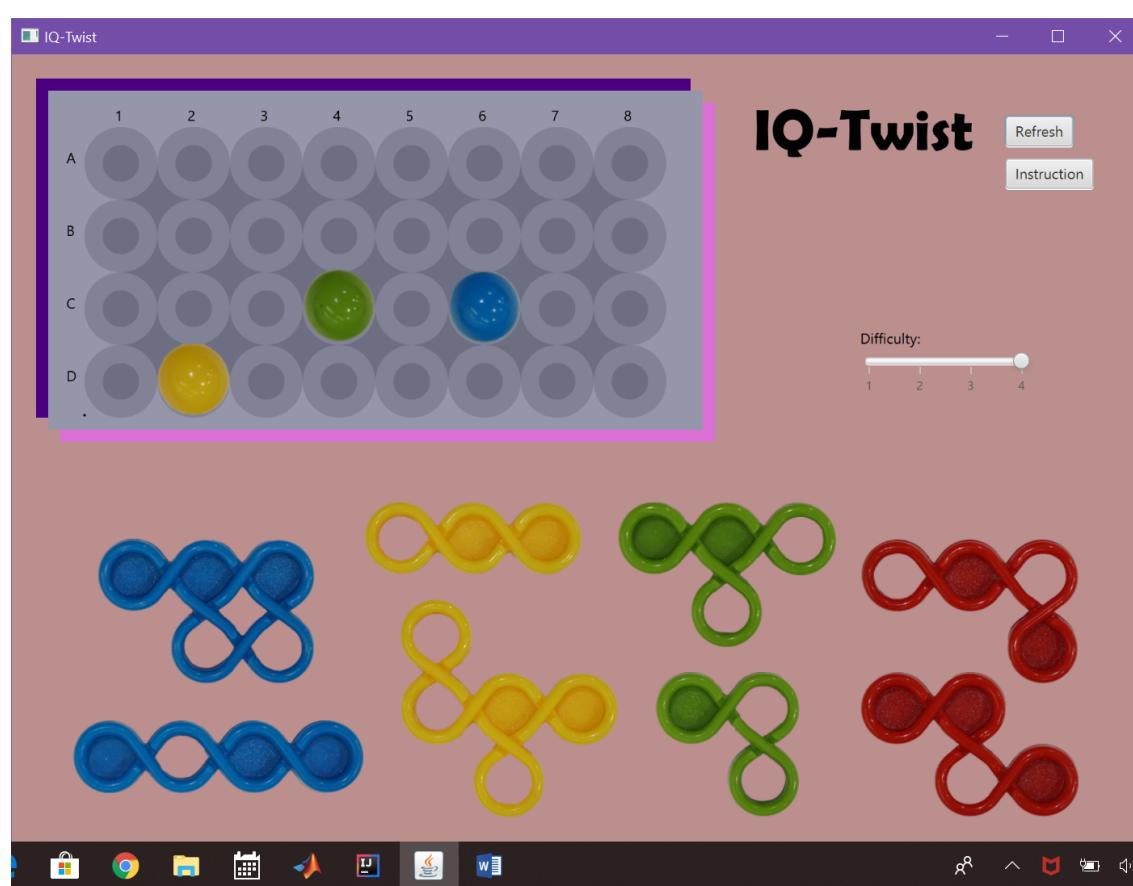

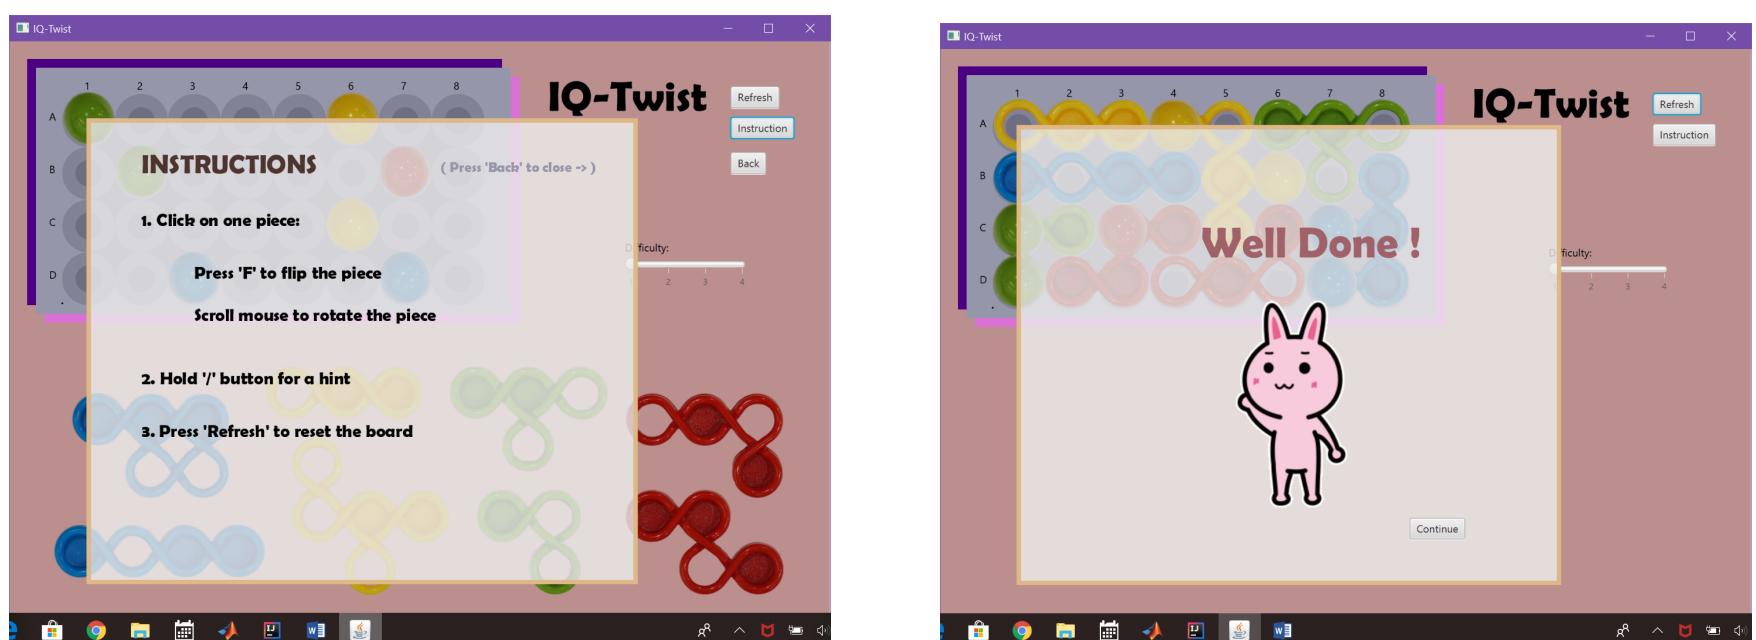

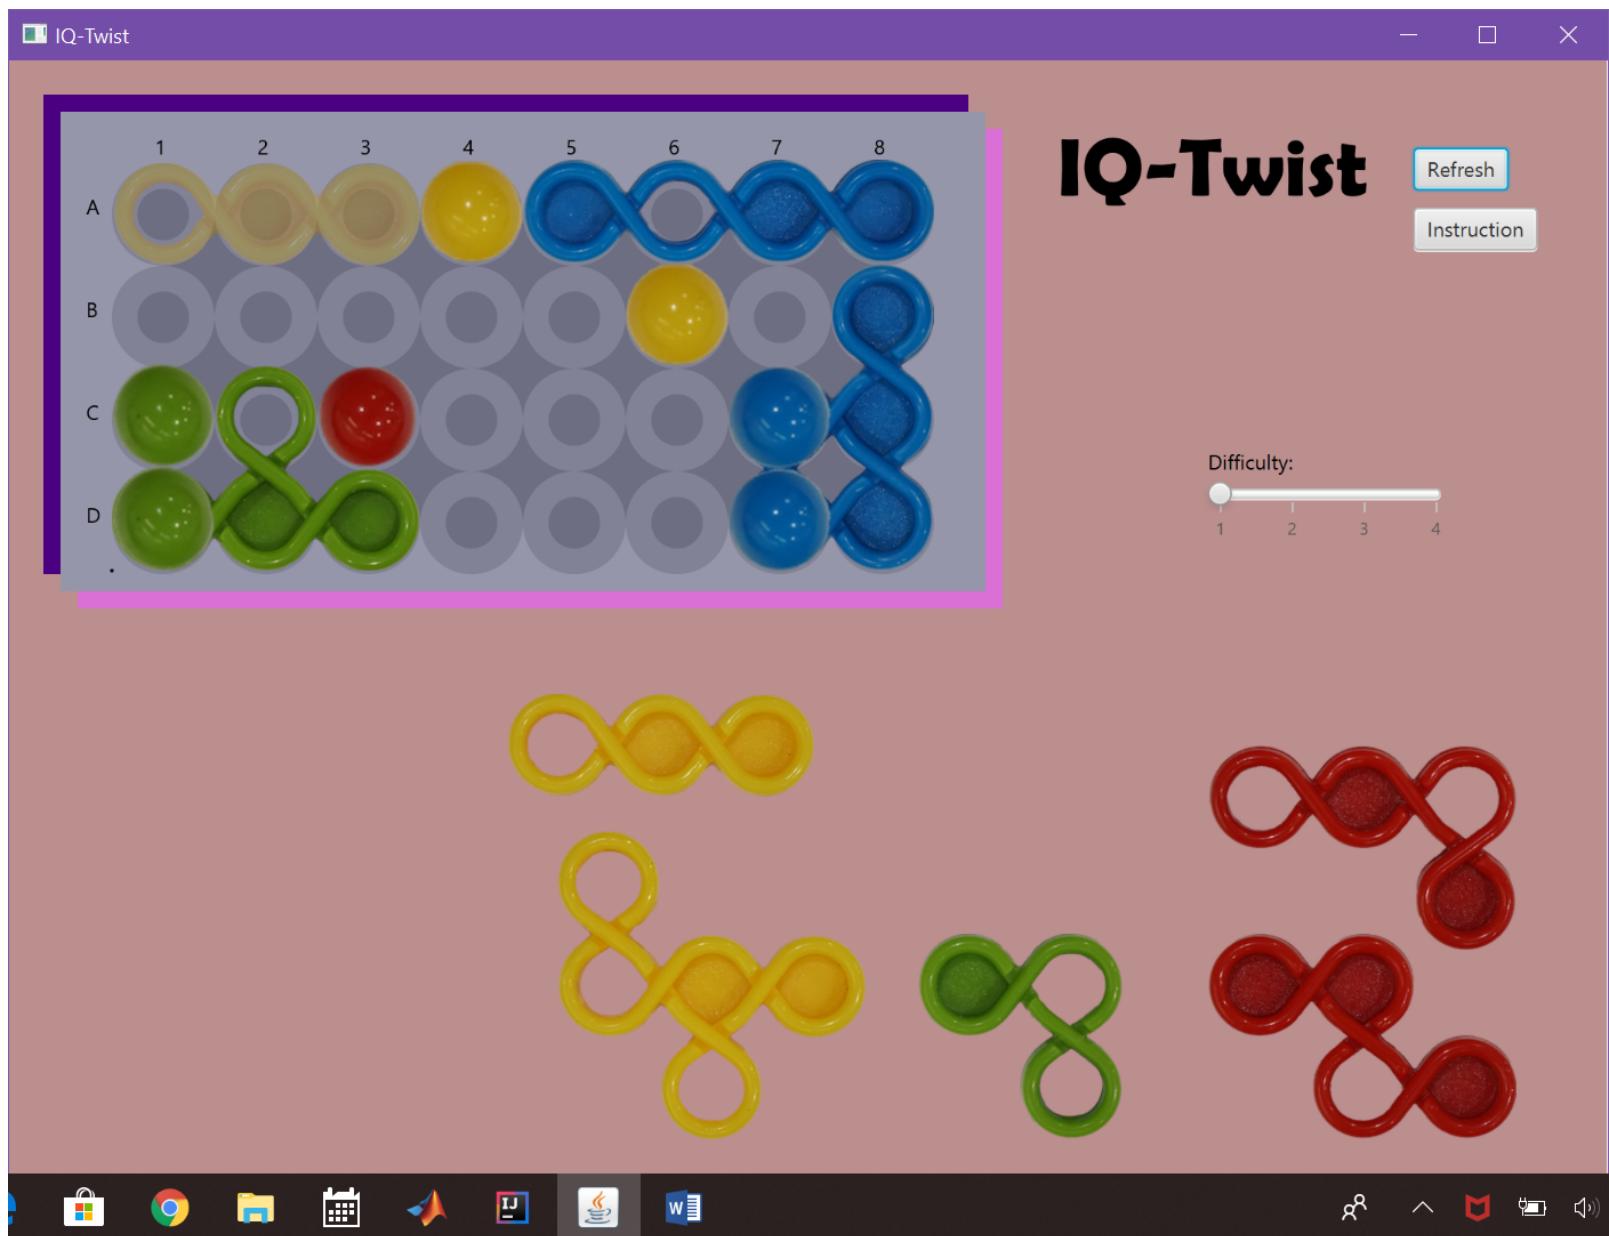

## Viewer

A simple viewer that displays a piece placement. Used for testing other methods.

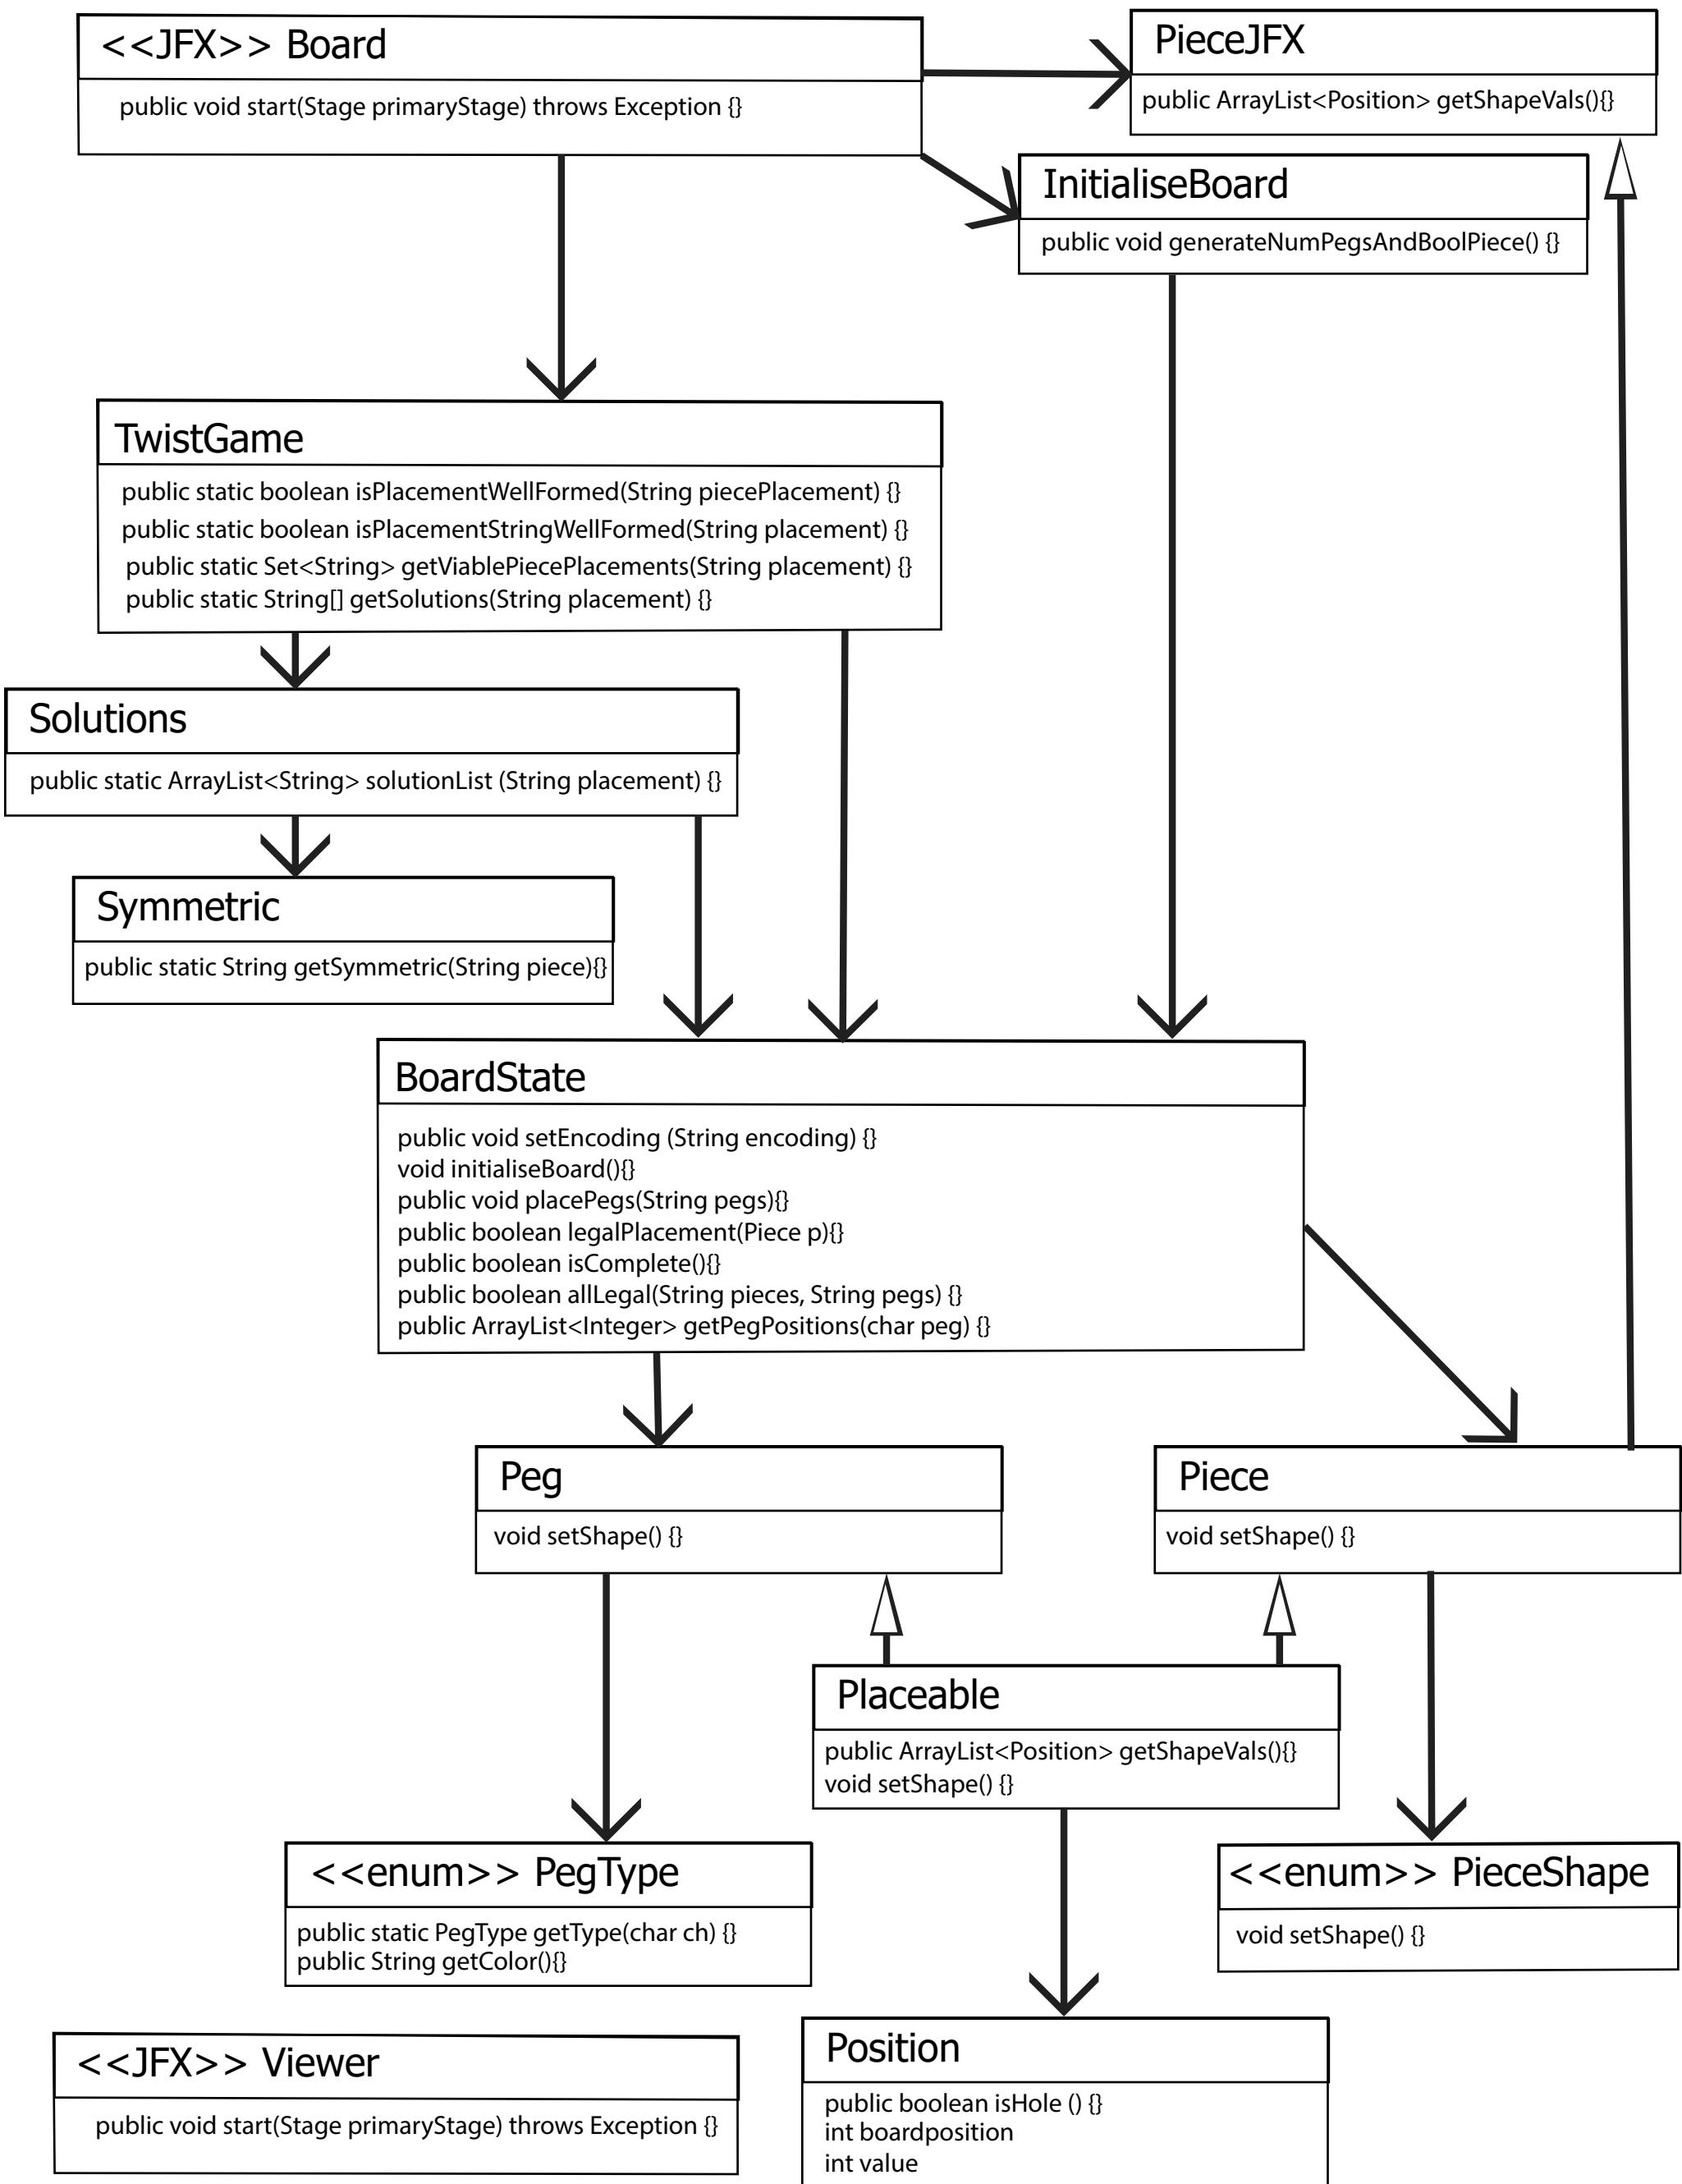

## Tests

Unit tests were written for many methods that were not tested by the provided framework. Viewer could also be used to help with testing.

# The Game Interface

# Structure

NOTE: internal methods and get/set methods have been omitted
